

# Lisbon JavaScript 2012

## The New Worlds of JavaScript

JavaScript is the most deployed language in the world. It has won as the scripting language for the Web and it's now rapidly conquering all the corners of modern development: Desktop, Mobile and Server.

We now live in a Brave New World where web technologies and JavaScript have permeated the software developer and surrounded him with a powerful language and a big community pushing it forward.

## The Conference

LXJS (<http://lxjs.org>) is a two days conference in Lisbon, Portugal. The event will take place on the 28th and 29th of September and will feature some of the best and brightest javascript minds, both from Server-side, mobile and front-end javascript.

Speakers will be arriving from the four corners of the world and congregate into the beautiful Mercado da Ribeira in downtown Lisbon where two speaker tracks will be presented to an expected crowd of at least 150 attendees, punctuated by coffee breaks and lunch. Track A will be curated and Track B will be open for registration by the attendees a few days before the conference date.

The curated track will proudly host open-source knights like Mikeal Rogers, Adam Christian, Brian Leroux, Charlie Robbins, Christian Kvalheim, Daniel Shaw, Dale Harvey, Fedor Indutny, Max Ogden, Maciej Malecki, Paddy Byers, Paolo Fragomeni and others talking about cutting-edge open-source projects, with closing keynotes about philosophy and open-source development punctuated by speaker panels.

## Community

This event is not for profit and organized by a group of portuguese software developers working in Portugal and abroad that share a love for JavaScript, community events and the beautiful city of Lisbon.

## Inquiries

Please send all partnership and sponsorship related inquiries to Nuno Job ([nuno@nodejitsu.com](mailto:nuno@nodejitsu.com)).
